EXPERIENCE

- Implementation of designs into interfaces
- Integration with backend and APIs
- User authentication
- Accessibility (ensuring barrier-free design)
- SEO optimization
- Code reviews and optimization
- Customer support

SOFTWARE ENGINEERING PROJECTS

xCurator

Curator is a web application developed for the Badisches Landesmuseum Karlsruhe and Allard Pierson Amsterdam, featuring a shared artifact database. Users can explore, filter, and share artifacts within personal narratives. The application utilizes cutting-edge technologies such as Next.js, GraphQL, Spring, and Keycloak for efficient and secure usability.

Siemens Energy

An internal tool that provides employees with access to all existing resources, projects, as well as their respective sections and descriptions. The project was implemented using Next.js, the 3pc Layout Components Library, Strapi, and GraphQL.

Ticket-System House Down Under

For the "House Down Under" attraction in Australia, we implemented an integrated ticketing system on their website. Users can conveniently purchase tickets online, and the system generates a QR code that is sent via email. The QR code is scanned and validated upon entry. React, Material-UI, Firebase, and Stripe were utilized for this project.
